

Barcode scanning and pick list checking

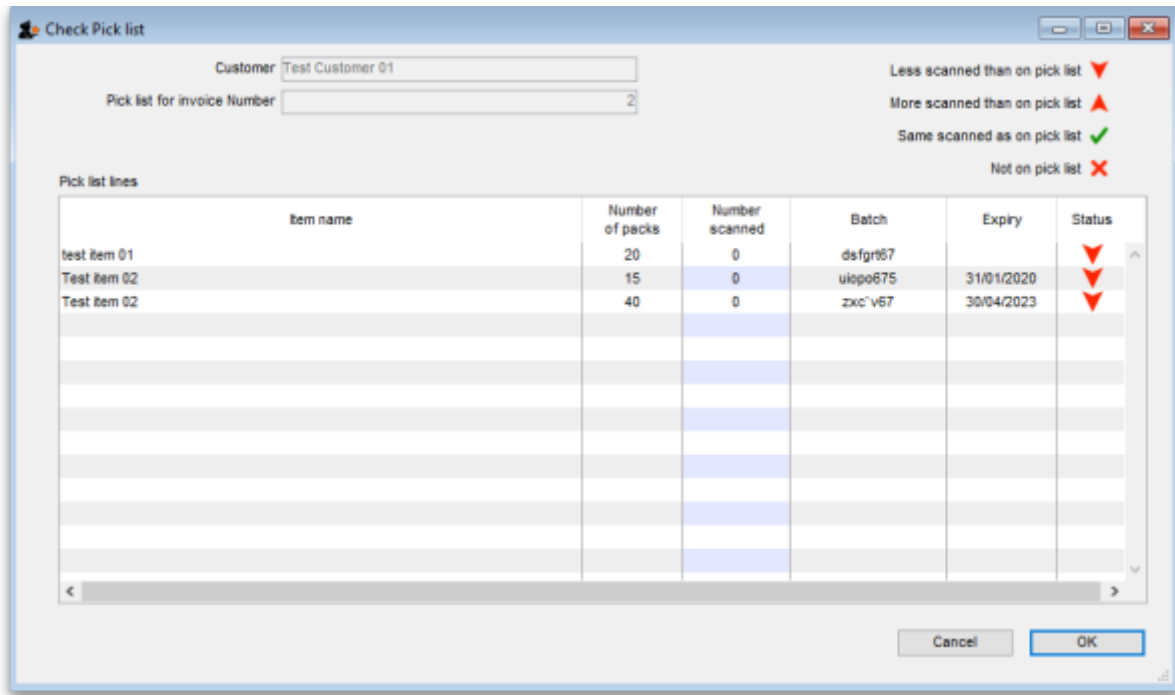

Added: Version 4.01

Another way barcode scanning can be useful is in checking that goods picked off the shelf for distribution to a customer match what was on the pick list.

This is done when distributing goods to a customer on a customer invoice. When the preference to use barcode scanners is turned on (see [Barcode scanning preferences](#)), the customer invoice window for new or suggested status customer invoices has a new *Pick list check* button:

When you have finished adding lines to the customer invoice, you print the pick list in the normal way (see [Issuing goods to a customer \(customer invoices\)](#))

Previous: [Barcode scanning and stocktaking](#) Next: [Barcode label printing](#)
